Using Database Videos in PowerPoint

**In PowerPoint:**

1. On the PowerPoint slide where you want the video to run, insert text or an image that you will click on to navigate to your video.

   ![PowerPoint interface with a video placeholder](image)

   **My Video**
   
   • video

2. Select the **Embed/Link** option from the menu below your desired clip

3. Click on “Copy” to the right of the link URL to select it

4. Select the **Record URL** if you want to point to the entire video starting from the beginning. Select the **Segment URL** if you want to point to the current segment only.)

   **Embed/Link**

   Copy

   Copy
From Kanopy

5. Select the “Share” option from the menu below your desired clip.

6. Highlight” the “Share link” text to select it, then right-click on the highlighted text and click on “Copy”.

In PowerPoint:

7. Select the text or image in your PowerPoint slide. From the “Insert” menu, select “Hyperlink” and paste the copied link into the “Address” box at the bottom.
Presenting In PowerPoint:

The database video clip links require log in to play and view. There are 2 ways to show the videos from PowerPoint:

1. Before starting your presentation, on the computer where you will be showing your PowerPoint presentation, log in to the Miami Dade College Library databases first, then open your presentation. When you click on the hyperlink to your video clip in your slide, it will go to that clip in the database and you can play it onscreen from there.

2. Open and run your presentation. When you click on the hyperlink to your video clip in your slide, it will bring you first to the log in screen. Log in and it will then bring you to the video clip in the database.
